TODAY'S TOOLBOX

Provide a summary of the below toolbox topics during your toolbox talk.

Finish Strong:

As the Spring 2020 event comes to a close and we look to some much needed rest, there are some things however that we need to watch out for in this time. We need to ensure that we are keeping our minds on task, not taking any short cuts and do not fall into complacency. Through out the event we have had success and only a few incidents. Overall we would like to thank each of everyone of you for the exceptional work and safety excellence that has been exhibited. Lets keep that momentum going right to the end.

Some things to keep in mind:

- Look out for pinch points
- Ensure all procedure steps are taken
- Maintain clear communication
- Double check permits and verify whether a specific permit or general permit is required
- Take time to complete the task, do not rush
- Ensure all appropriate PPE is donned and donned properly
- If unsure, ask. Get your Supervision and Safety involved

Lock Out Tag Out:

Just a reminder as Confined Space work is still being completed, that we ensure that we are following proper Lock Out Tag Out procedures. Verify that the lock box number and seal number are on the Permit. Make sure that we are locking off on the correct lock box with the appropriate departmental lock attached. Always store the key to personal locks in a safe place that will not be misplaced or lost. When exiting the Confined Space don't forget to remove the lock from the lock box. In the event a personal lock key is lost, report it to your Supervisor so that you are accounted for and the lock can be removed.

NOTE: Please ensure that when we are within 2M of each other, whether it be in the office or out in the field, we are wearing our face-coverings and/or APR.

Safety Recognition

Justin London—Stuart Olson

Karol Sakowski— Aptim

Dave Cadwell—Aptim

Sulyn Moy—Suncor
